

AQEEL AHMAD

ID: 1210332400755 **Nationality:** Pakistani **Date of birth:** 22/01/2004

Place of birth: Dhakki, Pakistan **Gender:** Male

Phone number: (+92) 03499242768

Email address: imaqeelahmad5@gmail.com

LinkedIn: <http://linkedin.com/in/aqeel-ahmad-a99760316>

Work: Township in Mansehra, 21314 Mansehra (Pakistan)

ABOUT ME

Python Developer with a solid foundation in Computer Science and a strong background in full-stack web development. Currently focusing on **web scrapping and AI automation**. I write scripts to extract and process complex data while building functional, data-driven web applications. Combining a passion for modern technology with hands-on skills in Django, HTML, CSS, and JavaScript, I genuinely enjoy the entire process from designing clean user interfaces to engineering backend architectures.

WORK EXPERIENCE

Developer 360 – Mansehra, Pakistan

Python Developer (Web Scrapping & AI Automation)

[30/06/2026 – Current]

LearnOboats -- IMMSG (I-VIII) Bain Nala – Islamabad, Pakistan

Link <https://tinyurl.com/TechFellow-Aqeel>

STEAM Teacher (Robotics & Embedded Systems)

[15/12/2025 – 01/05/2026]

EDUCATION AND TRAINING

BS Computer Science

The University of Agriculture Dera Ismail Khan [28/10/2021 – 05/08/2025]

City: Dera Ismail Khan | Website: <https://www.uad.edu.pk/> | Final grade: CGPA 3.75/4

PROJECTS

[25/08/2026 – 25/08/2026]

Automated Web Crawler Service *Technologies: Python, Scrapy, Scrapyd, MongoDB, PyMongo*

- **Architecture & Crawling:** Designed a robust web scraping engine using Scrapy to crawl multi-page catalogs, handling pagination, request scheduling, and structured data extraction.
- **Service Deployment:** Configured and deployed the crawler to a local Scrapyd server, enabling daemonized execution, remote job scheduling, and centralized log monitoring.
- **Data Pipeline:** Built a custom Scrapy Item Pipeline using PyMongo to validate, clean, and directly stream extracted data into MongoDB.
- **Reliability & Monitoring:** Managed concurrency settings, error handling, and runtime diagnostics via Scrapyd logs to ensure zero data loss during high-volume ingestion.

[10/09/2026 – 14/09/2026]

Hadith-Sunnah-Scraper | Distributed Web Crawler & Data Ingestion Pipeline Technologies: Python, Scrapy, Scrapyd, MongoDB, PyMongo, Data Engineering, REST Architecture

- Engineered a High-Throughput Scraper: Developed an asynchronous crawling pipeline using Scrapy and Scrapyd to extract and catalog 124,000+ classical Hadiths across 19 major collections from Sunnah.com.
- Database Architecture & Schema Design: Architected dual MongoDB databases (The_Nine_Books & Other_Primary_Collections) storing structured JSON documents preserving Arabic texts, chapter metadata, canonical references, and authenticity grades.
- Background Process Management: Configured and managed multi-threaded daemon workers via Scrapyd, implementing rate-limiting, custom middleware pipelines, and fault-tolerant pagination for multi-hour uninterrupted extraction.
- Open-Source Dataset Delivery: Cleaned, validated, and published over 180 MB of structured Hadith datasets on GitHub for developer and NLP research use.

Hum 3 Network – ISP Subscription & Billing Management Web Application Technologies: Python, Django, PostgreSQL/Supabase, Tailwind CSS, Alpine.js, WeasyPrint, Cloudinary, Vercel

- Architected and developed a full-stack ISP billing platform using Django, PostgreSQL (Supabase), and Tailwind CSS, streamlining broadband subscription workflows and customer account management.
- Built a dynamic bandwidth & package customization tool using Alpine.js and Django ORM, allowing customers to dynamically configure custom bandwidth speeds (2–50 Mbps) with real-time price calculation.
- Automated recurring subscription and billing lifecycles, engineering custom date-calculation logic (relativedelta) to handle standardized monthly billing periods, renewal triggers, and service expirations.
- Implemented secure payment submission & ledger management, supporting digital wallet (EasyPaisa) payment verification, receipt uploads via Cloudinary, and automatic outstanding balance settlements.
- Engineered server-side PDF invoice generation using WeasyPrint, enabling users to download itemized, branded billing receipts with complete transaction metadata.
- Designed administrative audit actions within Django Admin to streamline manual payment approvals, automatically updating user account balances and toggling subscription statuses.
- Integrated robust user authentication via Django-Allauth, implementing email/username authentication, Google OAuth social login, and signal-based automated profile provisioning.
- Deployed to production on Vercel utilizing serverless configurations, WhiteNoise for optimized static asset delivery, and remote PostgreSQL connection pooling.

US Healthcare & Doctor Directory Scraper, Scalable Web Data Pipeline Technologies: Python, Scrapy, ScrapeOps Proxy API, Downloader Middlewares, XPath/CSS Selectors, JSON | [GitHub](#)

- Engineered high-throughput web scraping crawlers using Python and Scrapy to harvest over 9,000+ verified US physician and medical clinic profiles across major metropolitan markets (New York, California, Texas, Florida).
- Developed custom Scrapy Downloader Middleware (ScrapeOpsProxyMiddleware) integrating ScrapeOps Residential Proxy API with automated geo-targeting (country=us), custom headers, cookies, and exponential retry logic to bypass anti-bot protections and IP rate limits.
- Reverse-engineered Google Maps internal JSON RPC responses, bypassing obfuscated front-end DOMs and anti-JSON-hijacking protection (}}}' prefix stripping) to extract granular clinic addresses, direct phone numbers, ratings, and Place IDs.
- Implemented automated asynchronous multi-page pagination on dynamic healthcare directories (Vitals.com), extracting 9+ attributes per doctor including specialty, patient reviews, years of experience, and accepting-new-patients status.
- Constructed structured JSON data pipelines (Doctor_Info_Web.json & Doctors_Info.json) with rigorous sanitization, missing-field fallbacks, and regex URL normalization for downstream data analysis and lead generation.

MindCraft – A Personalized Online Learning Smart Application (Final Year Project) MindCraft is a smart web-based learning system developed as part of my BS Computer Science degree. It uses machine learning to recommend personalized courses based on user performance and behavior. Key features include:

- Dashboards for both students and instructors
- Performance analytics and content upload
- Adaptive learning paths using Python and Scikit-learn
- The platform is built with Django, HTML, CSS, JavaScript, and PostgreSQL.

UrbanVibes E-commerce Fashion Website Technologies used: HTML, CSS, JavaScript (Responsive Design)

- Dynamic homepage with promotional banners and featured products
- Product listings with hover effects and quick view
- Responsive navbar and mobile menu using media queries
- Interactive shopping cart and animated "Add to Cart" button
- About and contact pages with embedded media and forms
- Fully mobile-responsive layout for tablets and smartphones

Link: <https://aqeel-ahmad.github.io/UrbanVibes-E-Commerce-Website/>

Malik Dhakki Dates Farm -- Full-Stack E-Commerce & Nursery Web Platform *Technologies: Python, Django 6.0, SQLite, JavaScript (ES6+), HTML5, CSS3, Django ORM, REST/AJAX APIs, Local-storage API, Pillow, and WhatsApp API Integration.*

- Tech Stack: Python, Django 6.0, JavaScript (ES6+), HTML5, CSS3, SQLite, RESTful API / AJAX, Font-awesome
- Developed a responsive, end-to-end agricultural e-commerce platform for date palm varieties and produce management.
- Built a client-side shopping cart system using JavaScript (ES6+) and Local-storage with real-time price calculations, interactive modals, category filtering, and instant search capabilities.
- Implemented a dual-checkout pipeline that persists structured orders into a Django ORM / SQLite database (generating unique order reference IDs via uuid) while simultaneously triggering formatted WhatsApp order notifications for instant customer service.
- Designed a custom Django Admin dashboard enabling site administrators to manage dynamic products, gallery items, services, customer inquiries, newsletter subscribers, and site settings.
- Optimized UI/UX with dark mode support, mobile drawer navigation, responsive design, and fallback static asset management for seamless media loading.
